

Kauly Rosa Bohm

Fullstack Developer

About Me

I have been interested in coding for many years and I completed my first coding qualification more than 10 years ago. Although I have had a variety of jobs in the past, coding has always been my passion. Finally six years ago I was able to pursue coding on a fulltime basis and I started coding professionally. It's been so rewarding, I started as an intern and made my way up in the ranks quickly after that. The journey brings me opportunities to work with amazing people and make products used by hundreds of people worldwide. I am very grateful for that.

I have been working as a full-stack developer, focusing on the JS world and all the cool things it brings to the table. I am always learning new things and am very excited to work with new technologies. Lately, I've been delving into AI, particularly NLP and LLMs, to improve user interactions with web applications. You will find a reliable coworker in me, always willing to help and learn from others, documenting my progress, and remaining realistic about deadlines and features. I hope you enjoyed reading this. Please feel free to contact me.

Experience

Company: Freenlancer

Job Title: Full Stack Developer

Date: Feb 2023 - Current Job

Development of a software used by security forces, it was a real-time map-based application to manage incidents. The following tools were used: React, Redux, Mapbox, SocketIO, MongoDB and Express. I created a lot of cool stuff here, with a highlight being a map that showed, in real time, the incidents and also the location of the agents. The backend sent the incident to the mobile app of the nearest agent. I did the front and back, the mobile app was done by someone else.

Job Title: Full Stack Developer

Date: Apr 2021 - Feb 2023

Fullstack Developer, using React, NextJs, Hasura and Firebase. During this time I participated in the development of two NFT marketplaces. I also started learning Rust for game development using Bevy and WebAssembly. I spent most of my time on the frontend creating functionalities such as, new screens based on designs, integration with internal and external APIs like social login, payment gateways and the Discord API.

Company: [Freelancer](#)

Job Title: Full Stack Developer

Date: Mar 2020 - Apr 2021

Freelancer, developing websites and web applications for small and medium-sized businesses. All work done with React. I spent most of this time working for the same client, developing a real-time chat application for customer service. The application was not just a chat, but had a whole management system for tickets, attendants, and companies. I was responsible for the frontend from start to finish. It was a very challenging job, involving chats with sockets for sending and receiving videos, audios, and files. We had clients with hundreds of tickets per day and this required a highly performant application.

Job Title: Frontend Developer

Date: Aug 2019 - Mar 2020

I worked on maintenance and new features for the company's main product, a web application for vehicle fleet management. I also worked on the development of a new product, a system to track all things (IoT) and not

just vehicles. Here I created functionalities such as maps, dashboards, report screens and forms. All done mainly with React, Leaflet and D3.

Company: [tdsoft](#)

Job Title: Frontend Developer

Date: Mar 2019 - Aug 2019

I worked on the team responsible for migrating the company's main product from Java to React and Next. I was responsible for creating the project skeleton and its first features and screens, such as authentication, API integration, and filter screens with tables.
